- Most of the rural area they can't implement the IOT devices because of they won't know about the device uses and It is difficult to use it

- Here we design the application to interface in the understandable language for the farmers it will easy to handle (or) operate the system form there any place

- In perviously the software user is very limited but here we can able use multiple device in a family

- The software we can able moniter all the activity of the field in the single window

- All the data can be store in the cloud and send acknowledgment to us

- Here we implement solar power to the all IOT deviceses to unbreakable connection it will help us 24x7 we can moniter the field

- We can use in Green House
